

# Contact Us

EMPower include all project comments and suggestions from interested stakeholders in the design iteration processes for all our projects when possible. This can include input from Statutory or non-Statutory Consultees, individual community members or larger community groups.

Based in Co. Cork, Fehily Timoney, are the lead environmental consultant working on the proposed Coumnagappul Wind Farm project. Fehily Timoney will consider and integrate all project comments and suggestions into the ongoing studies and assessments which produce the final project design and final Environmental Impact Assessment Report.

As a design team we commit to considering all and any project suggestions, whenever they are received. For the Coumnagappul Environmental Impact Assessment Report, suggestions can best be considered if they are received prior to 31/10/2022. After this point the proposed Coumnagappul Wind Farm Project's Environmental Impact Assessment Report will be in the process of being finalised for submission to the Consenting Authority

You can contact us on any of the following contact details to discuss this project further:
